

# The GCP Structure

# THE CHALLENGE - 8 KEY STATS

35,000 more residents  
in Greater Cambridge in  
2021  
than there were in 2011

44,000 more jobs  
and 33,500 more  
homes  
expected by 2031

We need to reduce traffic by  
25% to run  
better public transport and  
reduce emissions

In 2019 there was  
10%  
more traffic than  
there  
was ten years ago

Car use is at 92% of  
pre-covid levels yet  
bus use is only at  
73%

Transport causes 35% of  
local  
carbon emissions

121 deaths in Greater  
Cambridge  
attributable to air  
pollution in 2020

Thousands of people  
living and working in  
Greater Cambridge have  
no alternative to  
traveling by car

# Innovation Prospectus

## Purpose:

- Set out how the market can engage with the GCP – testing and trialling new technologies
- Focus trials and pilots on challenges that the GCP are working on
- Create a framework for assessing which companies to allocate resource to
- Set out procurement approaches including innovation procurements
- Embed Innovation across all GCP workstreams
- Set out principles for trialling in the GCP area

# Data Collection – Collaborative Innovation

Issue: We don't have the granular data needed on movement in the city

Enabled an initial pilot of VivaCity technology

Scale funded trial – Mill Road Bridge closure

Assessment of accuracy

At scale deployment  
80+ sensors

Assessment of scale deployment

Alechera - Data Platform

Smart signals trial

# Starling Technologies

## Starling's AI technology provides:

- Advanced counts and behavioural analyses at crossings, for example:
  - Pedestrians eg. confident, reluctant, running, waiting, near collisions
  - Vehicles eg. do and do not give-way, stopping distances, approach speeds
- Predictive approaches to optimise crossings to reduce pedestrian waiting times without a commensurate delay to vehicles, and a better pedestrian experience

## Sensors

- Starling standard or high-powered sensors
- Extra wide field of view reduces the overall number of sensors required
- Option to use existing client CCTV

**STARLING**  
TECHNOLOGIES

# Automated Transport– External Funding Bids

Issue: Need to improve public transport – how can we utilise new vehicle technologies

**Expanded services:** running on-demand services out of hours when traditional buses may not operate.

**Improved first and last mile transport:** Automated vehicles offer a cost-effective solution to closing the first/last mile gap, by bringing bus stops closer to places of work and homes.

**Better accessibility for travellers with disabilities:** provide a door-to-door service for passengers with disabilities. Any savings from not having a driver could be diverted into support staff to help with entering and exiting the vehicle.

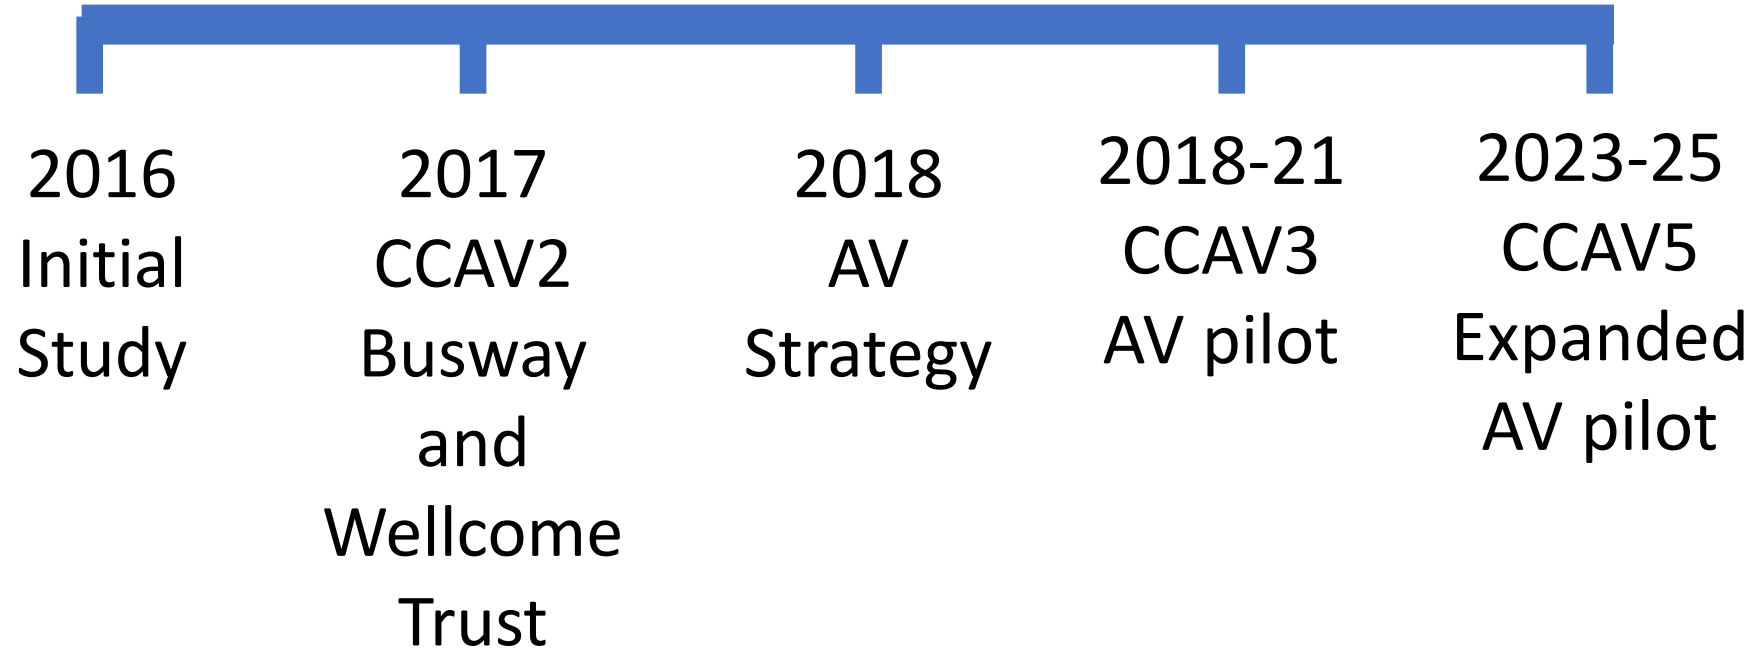

**Reduced operations costs:**

- Potential to reduce both costs and human error.
- Risk reduction helps lower insurance and liability costs
- Reduce staff overheads.
- Greater monitoring of vehicle reduces maintenance costs

# Automated Transport– External Funding Bids

## TIMELINE

# Cambridge Connector

**Lead Partner**

**Communication Partner -  
Deploy 5G**

**Autonomous Vehicle  
Provider -**

**Simulation Partner – Digital  
Twin.**

*d*(risk)

**Testing**

**Service Provider**

# Solving the Challenge

Mixed fleet of **electric, autonomous** vehicles

Private **5G network** enabling remote operations

Virtual **simulation** to test the system

Remote operation to support the fleet

Extensive field **testing** to validate the system

Service run by a **local operator**

# Approach and Technology

## Remote Operations Progression

### Cambridge Connector Project

*We aim to remove the operator from the driving seat and have them monitor more than one vehicle*

#### CURRENT STATE OF THE ART

*Safety operator in the vehicle.*

*1 operator to 1 vehicle*

#### NEXT ESSENTIAL STEP

*Safety operator remote from the vehicle.*

*1 operator to 1 vehicle*

#### TARGET OPERATING MODEL

*Safety operator remote from the vehicle.*

*1 operator to multiple vehicles*
