Cloud trends

Which of the following IT deployment models does your organisation use today?

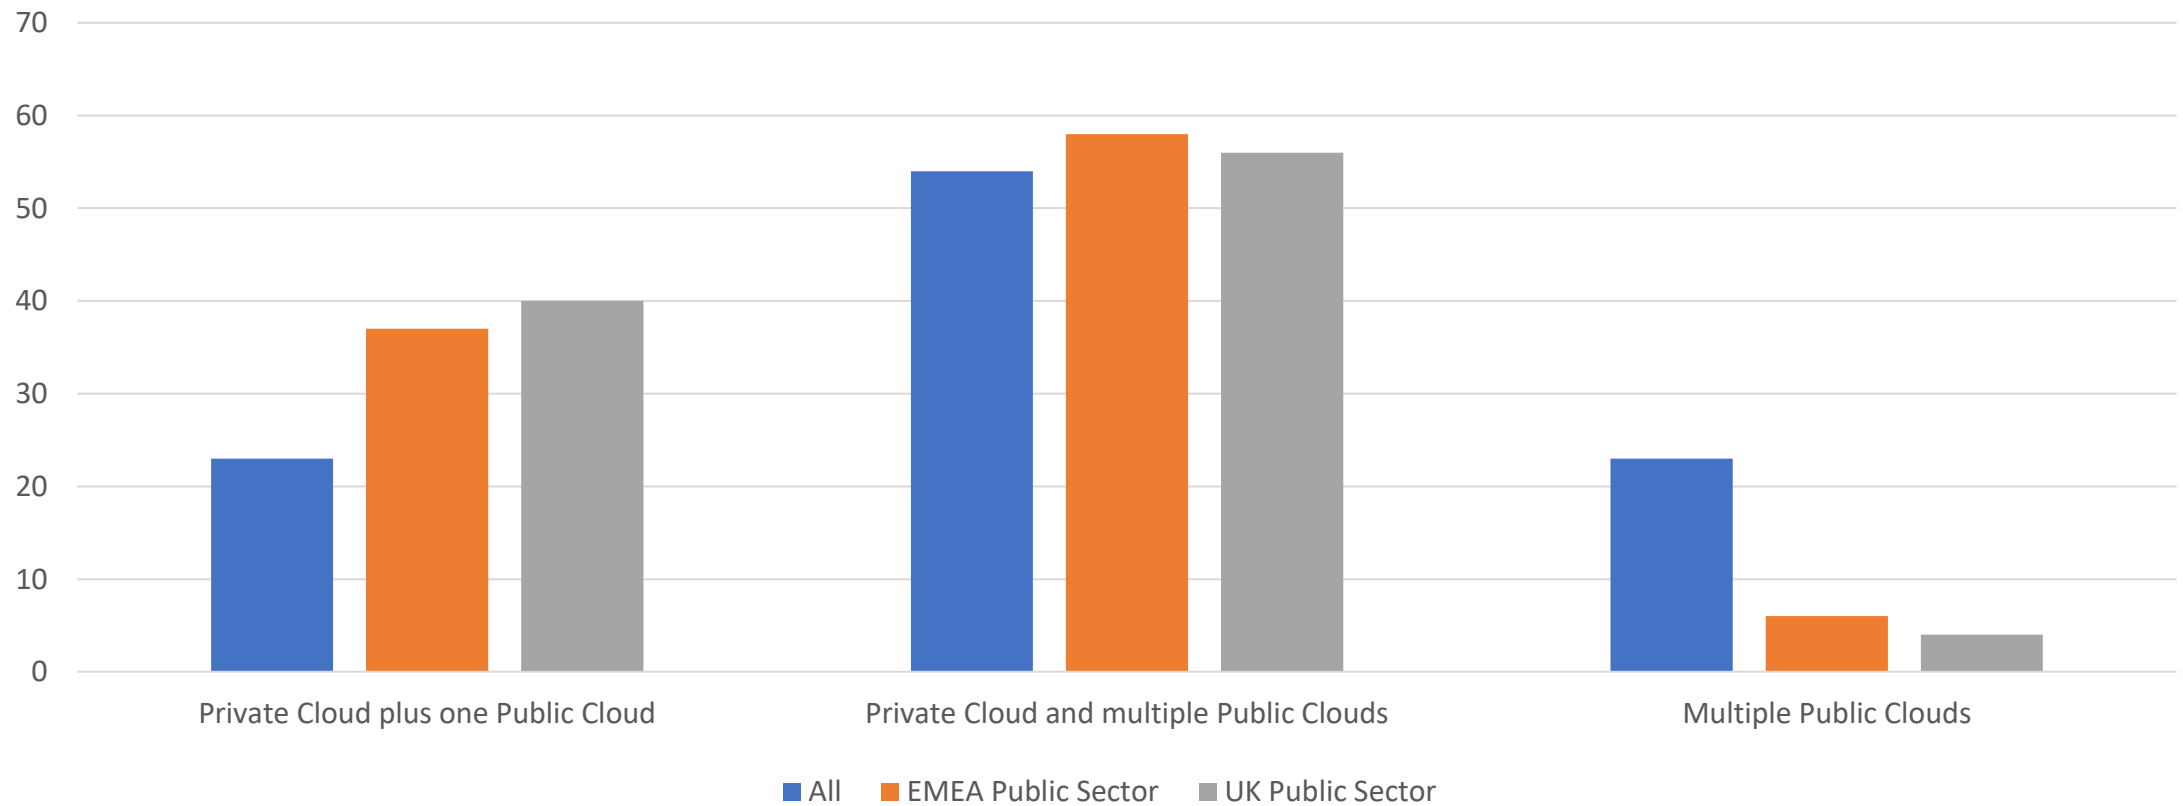

Cloud trends

Which of the following IT deployment models will you use in one to three years time?

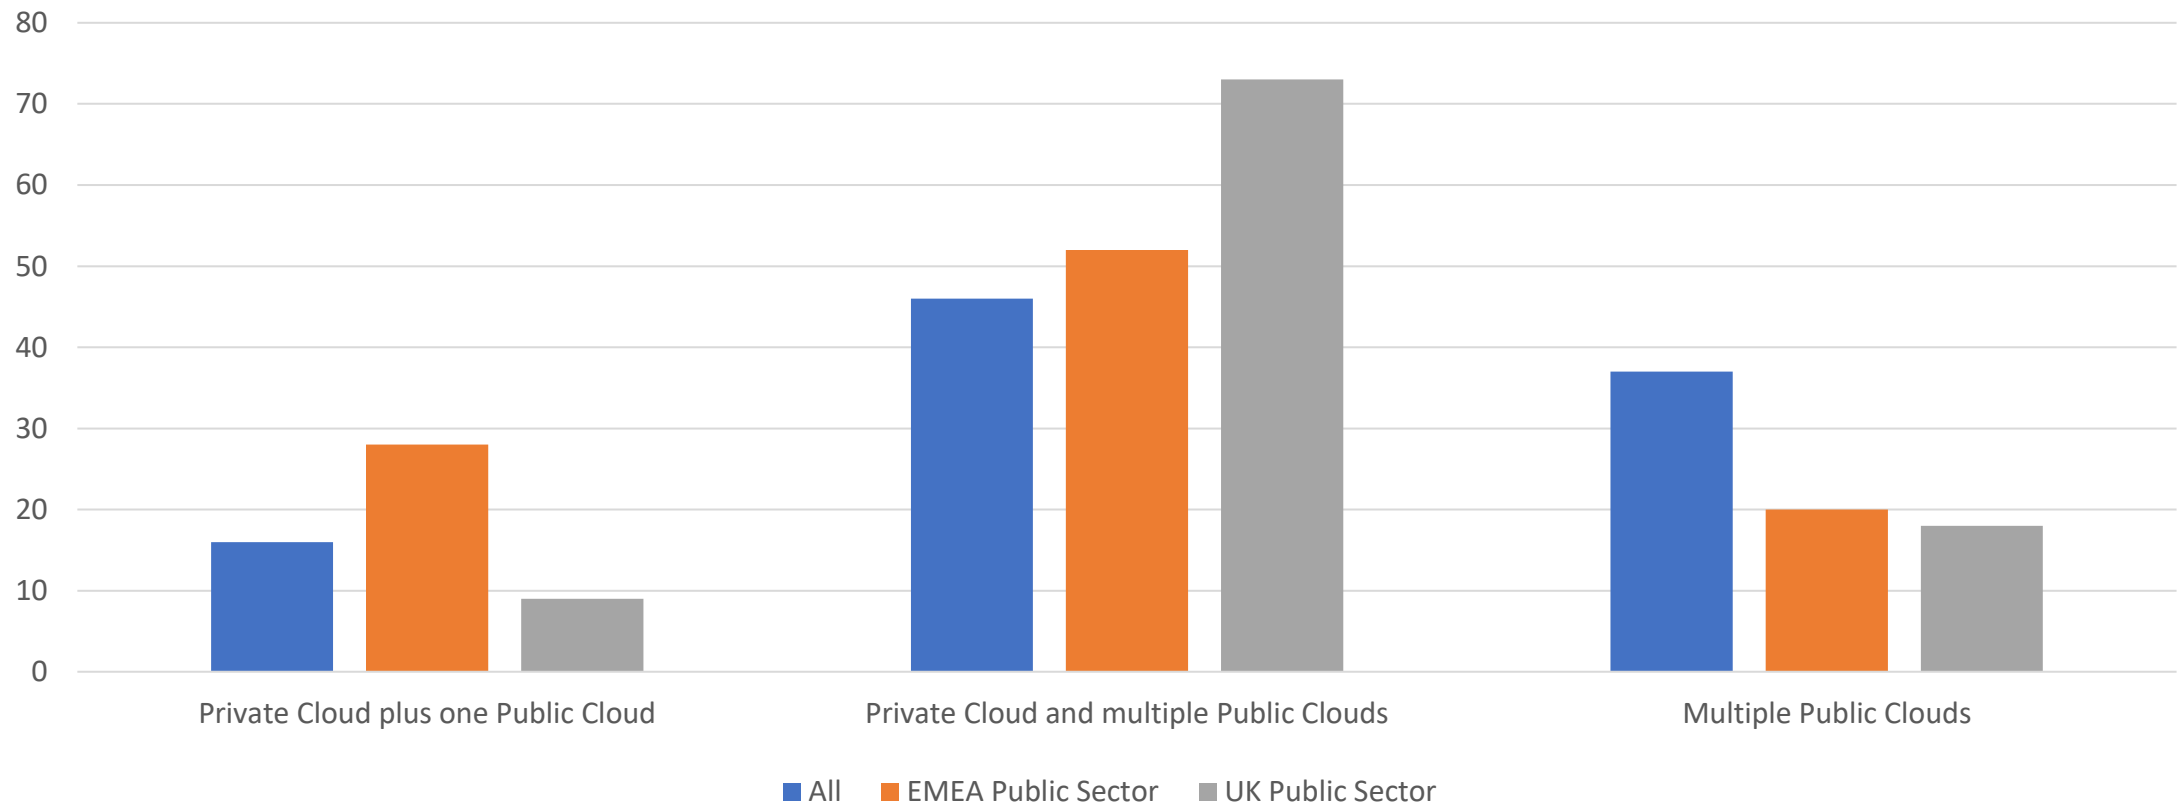

Cloud trends

What cloud environments does your organisation use today?

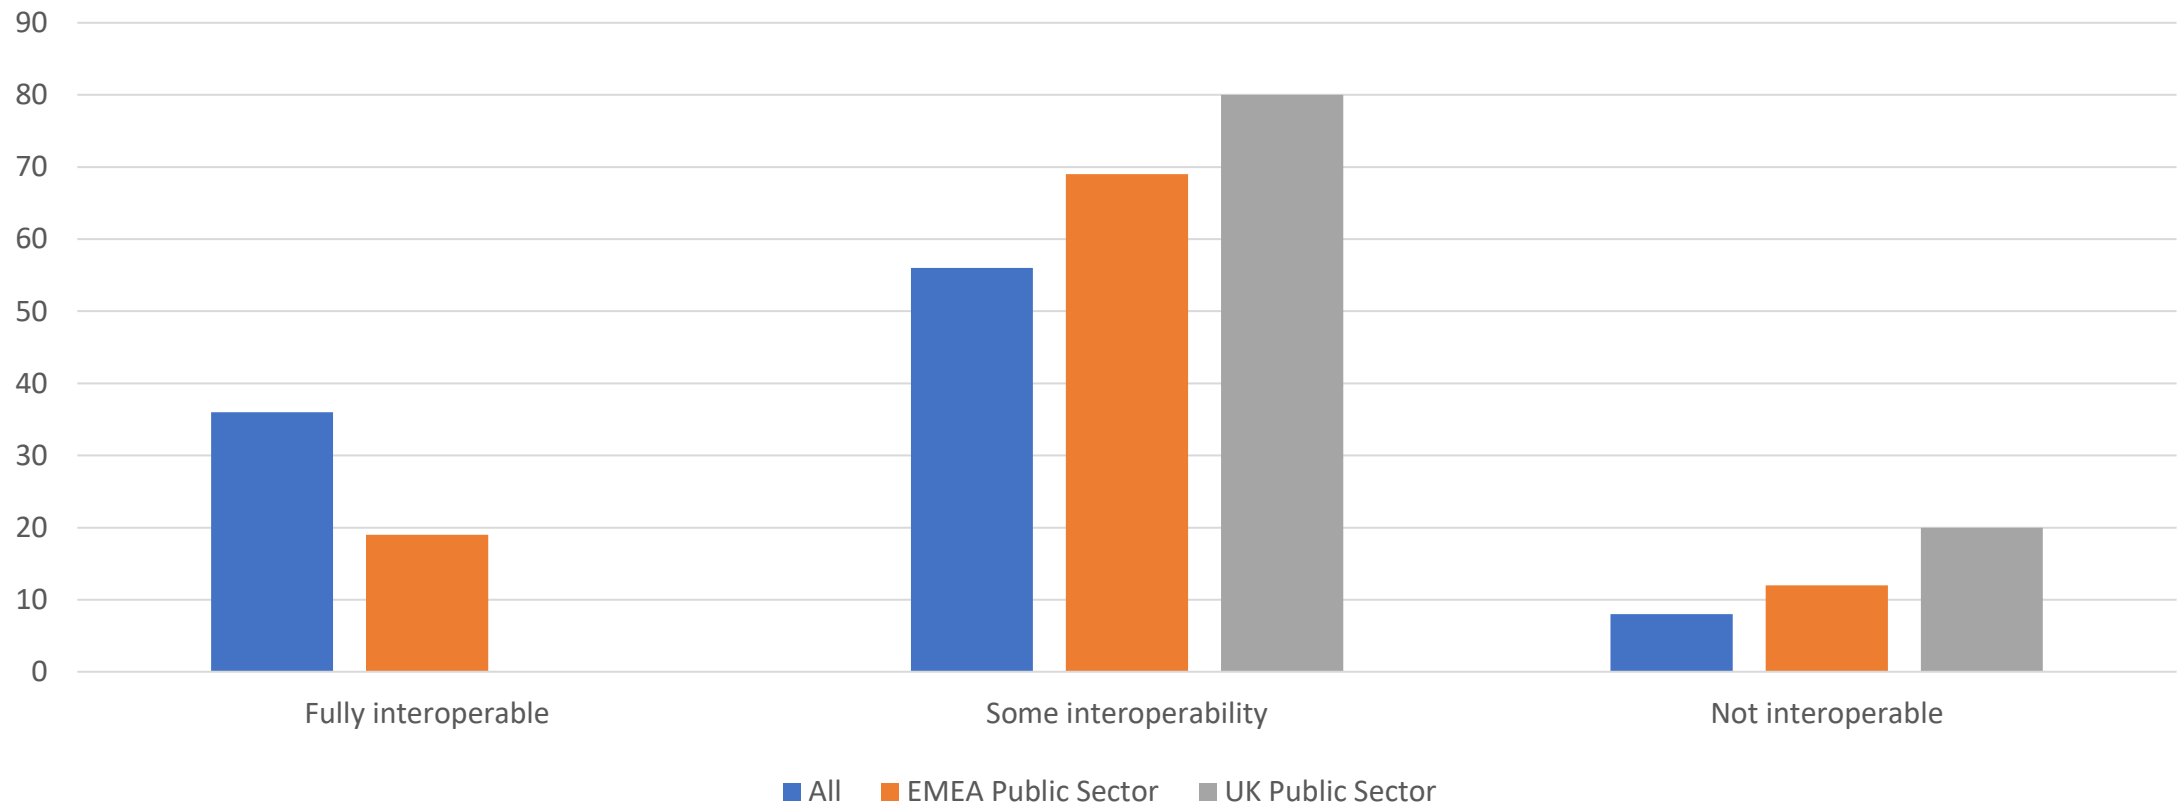

Cloud trends

What cloud environments will your organisation use in one to three years time?

Cloud trends

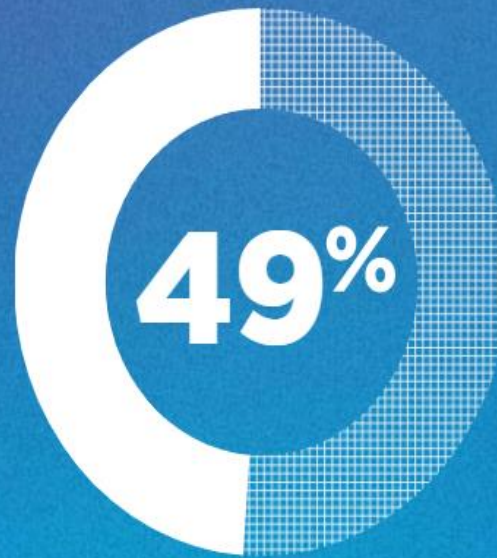

Are the cloud environments your organisation uses today interoperable?

Top Multicloud Challenges

Security

Integrating data across
clouds

Managing costs across
clouds

Multicloud Challenges

Key Findings

- Multicloud—an IT operating model that combines multiple clouds, public or private—is the most commonly deployed IT environment.
- Interoperability among multiple cloud environments is crucial, though complexity, from security to data integration, remains a top concern.
- Application mobility is top of mind.

Thank you
